SUMMARY

Front-End Software Engineer with 3+ years building scalable design systems and real-time dashboards used directly by leadership in React, Next.js, and SvelteKit. After a year exploring game audio design, is returning to front-end engineering with renewed focus.

SKILLS

Languages & Frameworks: JavaScript ES6+, React.js 19, Next.js, HTML5, CSS3, SvelteKit, Svelte 5
Libraries & Tools: Vercel, Chart.js, Lit.js, SVG, Webpack, Vite, Git, VS Code, npm
Design & UI: Design Systems, Flexbox, Grid, SCSS, Responsive Design, Web Standards, Accessibility
Other Skills: Agile, Scrum, Communication, Code Architecture, SSR

PROJECTS

Yuma Internal Dashboard (JavaScript ES6+, SvelteKit, Svelte 5, SCSS, Chart.js, Vercel)
Cryptocurrency portfolio webpage

- Designed and built a cryptocurrency dashboard utilized daily by company leadership to monitor performance metrics, providing a reliable tool for tracking key financial and operational data.
- **Led Front-End development efforts,** ensuring a robust and scalable architecture, seamless deployment with open-source API integration, and styling that fully adhered to brand guidelines.
- Implemented an automatic refresh feature to deliver real-time data updates.

Design System (JavaScript ES6+, SvelteKit, Svelte 5, SCSS)
System for building consistent web experiences

- **Spearheaded a design system,** successfully adopted across multiple projects with varying technologies, enabling seamless consistency and adaptability.
- Worked with designers and managers to align the design system with team needs.
- Supported engineering team adoption through hands-on integration help including creating a documentation site for developers.

WORK EXPERIENCE

Yuma (Front End Software Engineer) Jan 2025 – Apr 2025
Forefront of decentralized intelligence

- Quickly developed a robust dashboard for the dTAO launch, delivering accurate Bittensor chain data to support leadership with essential insights during a critical rollout.
- Successfully engaged with leadership to gather valuable insights on app usage and priorities, leveraging their feedback to enhance functionality and align with strategic goals.

Foundry Digital (Front End Software Engineer) May 2022 – Dec 2024
Top Bitcoin mining pool in the United States

- Redesigned and launched a site map feature, enabling users to visualize mining operations with greater clarity and effectiveness.
- Integrated the design system across multiple codebases, enforcing consistent standards.
- Demoed a prototype to leadership, gathering feedback that guided design refinements.
